I am not aware of any direct support either. I believe direct support came from Eastman who provided an SOP describing GC conditions to Dupont chemists who modified it for water. I believe they then trained National Guard mobile lab team. Additional contract labs (MATRIC and REIC) were later hired by AW, I believe. Ft Meade Lab became involved supporting Reg 3. I am not sure how many labs are now analyzing samples in an official capacity to meet the "non-detect" goal for MCHM.

Not directly but I believe we sat in on calls with the Ft Dietrick Region 3 lab, the West Virginia lab, and American Water to discuss detection limits for PPH. I am copying Dan Hautman for confirmation that American Water was on the line because he was actually on the call.

OK, thanks. Greg, did we assist AW with analytical methods for the contaminants in the WV spill?

American Water is not a member of the WLA nor has it participated in the lab response exercises we have sponsored.
